

BUILDING MANAGEMENT SYSTEM (BMS)

HOUSING | HOTELS | HOSPITALS | OFFICES | INDUSTRIAL PROCESSES | LOGISTIC CENTERS

> DESCRIPTION

Building automation and control system supporting the energy-efficient, economical and safe operation of the building's technical installations.

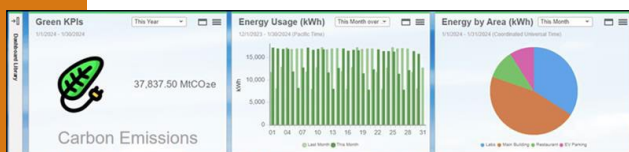

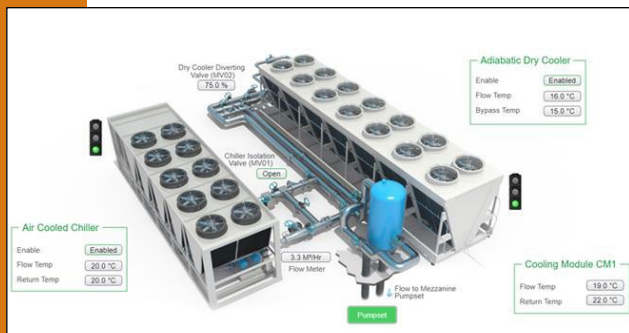

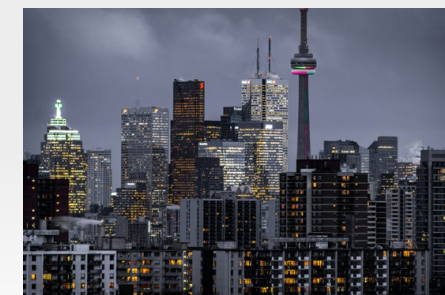

> APPLICATIONS

Create intelligent and insightful buildings. Increase occupant comfort and satisfaction. Adapts to today's dynamic workplaces. Valid in any type of building: homes, hotels, offices, hospitals, also in industrial processes, logistics centers, etc.

> FUNCTIONS

- The **Automation Server performs key functions** such as control logic, trend logging and alarm monitoring and supports communication and connectivity to fieldbuses and I/O modules. The distributed intelligence of the EcoStruxure BMS ensures that the system is fail-safe and provides an outstanding user interface.
- Simplify integration** between building systems and other areas of your business. Maintain optimal energy and operational efficiency. And ensure occupant comfort and well-being, all with a solution flexible enough to meet your evolving building needs.
- Simplify the maintenance of your building.** The BMS is designed to give you peace of mind 24/7. By constantly monitoring systems

and identifying failures, we will proactively address building inefficiencies. This portfolio of services leverages people, technology and collaboration to reduce operating costs, improve occupant comfort and increase asset value throughout the building's lifecycle.
